A New Paradigm in Healthcare

BlockMed
A New Paradigm in Healthcare

[Home](#) [FAQ](#) [Video](#) [Demo](#) [English](#)

 @blockmed

blockmed.com.ar

The healthcare system is fragmented

Sovereignty and security issues

- Health data is owned by institutions, not by patients.
- Security and privacy risks due to centralized databases.

Interoperability and cost issues

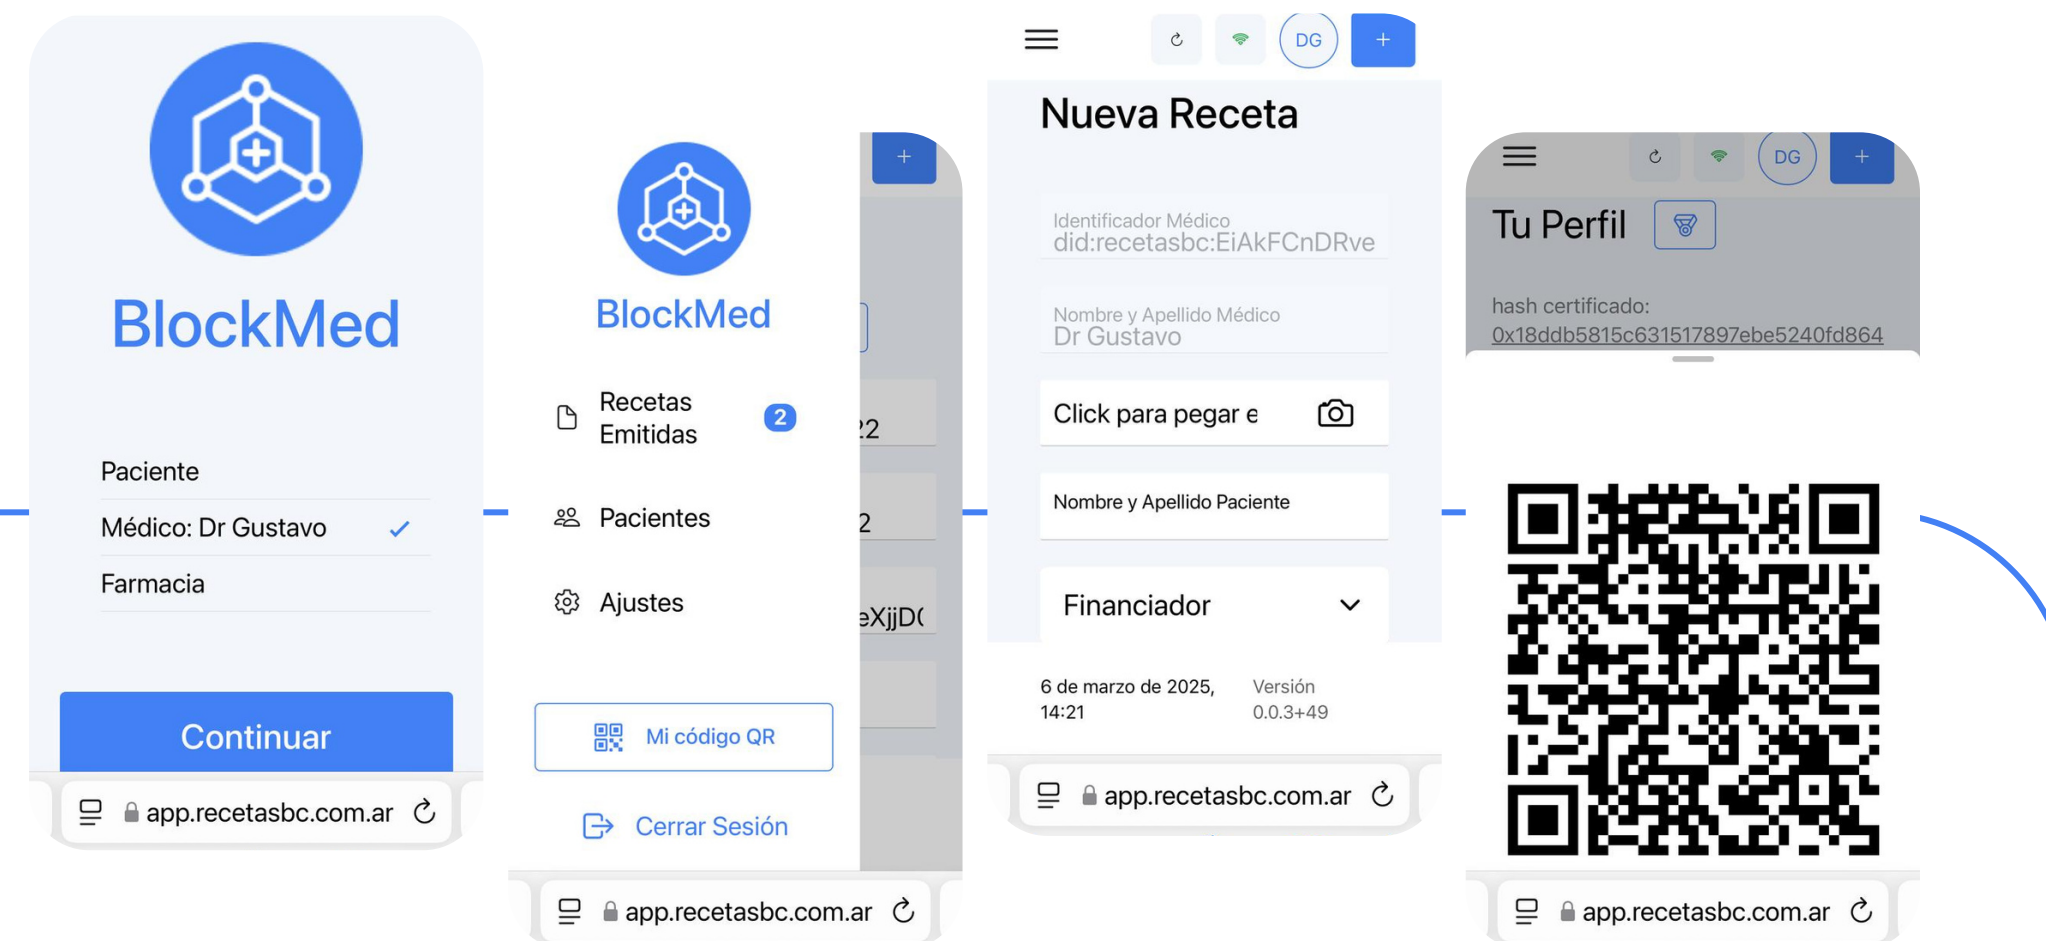

- Lack of interoperability between systems.
- Excessive auditing costs due to a lack of trust.

Patients must carry their own medical records from one doctor to another

Today, the most important person in the healthcare system—the patient—has the least control over their own data.

BlockMed reinvents Trust and Traceability in Healthcare

Unique digital ID for every actor in the healthcare ecosystem

Peer-to-Peer interactions with no third-party intermediaries

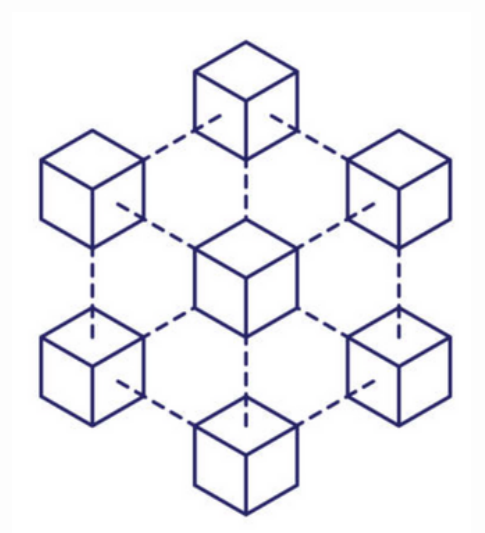

Sensitive data stored on personal devices and never exposed

Medical transactions recorded as hashes on blockchain—secure and traceable

Trust and interoperability through Peer-to-Peer verification

Blockchain Technology and Web3

- Decentralization
- Distributed Ledger
- Immutability
- Cryptographic Security

Self-Sovereign Identity

- User Control & Ownership
- Privacy By Design
- Interoperability
- Decentralized Identifiers (DID)
- Verifiable Credentials (VC)

A Massive and Inefficient Market

- Global healthcare industry valued at \$3.67 trillion (WHO)
- Siloed data models
- High administrative and auditing costs
- Cyberattack risks

Blockchain in Healthcare: Where Others Fall Short

- 30 companies focused on blockchain + healthcare solutions
- Mostly in research and pilot stages, no production-ready systems
- None are addressing the full patient journey
